SOLID COVERS

Fabricated from 18 gauge pre-galvanized steel, made to fit flush over ST PAUL CORRUGATING's Accessway Areawalls. Formed locking curvature on three sides to slide-lock onto Areawall bead. Flush wall mounting formed to make a channel configuration, one inch by one-half inch legs to bridge and support opening. Not designed or offered for sale as a load carrying cover but rather as protection from weather elements offering insulation value. Acts as a safety cover where our square style Areawalls are used as a crawl space accessway.

Prices and Terms of Sale: Solid Covers are sold F.O.B. our plant in Minneapolis, MN, when ordered without Areawalls. Covers will be freight pre-paid with Areawall orders that qualify for freight pre-payment. The prices for covers are net; however, the number ordered may be counted for quantity discount on Areawalls. Minimum order for covers is 10 units of a size. We recommend the covers be ordered along with matching Areawalls to assure a proper fit.

SOLID COVERS

18 gauge Galvanized Steel
